

DITEC SECTOR RESET

The most energy efficient door

www.ditecdoor.com

DITEC SECTOR RESET

The Ditec Sector Reset is a self-reinserting roll-up door with a soft bottom edge, offering excellent sealing. This door is suitable for heavy duty applications.

Improved working conditions

OPTIMIZED PROCESS FLOW

The fully flexible curtain without rigid bars allows the door to open and close fast. With the INVERTERmotion, speed can be differentiated and increased up to 3 m/s. The self-reinserting function of the curtain reduces the risk of downtime in case of accidental hit.

ENERGY SAVINGS

The high operating speed avoids the doors remaining open longer than needed. Thus, the working environment remains stable and energy can be saved.

SEALING AND WIND RESISTANCE

The curtain is retained in the side guides by means of zippers that provide excellent seal. This minimizes the transfer of air and the infiltration of dust. On doors with INVERTERmotion, the step-by-step closing feature (SBS) makes sure doors can close even under windy conditions.

LOW NOISE

Thanks to the specially designed side guides and the continuous zippers, the door operates silently.

Safety Linear Encoder

Safety assured

PROTECTION OF PEOPLE & GOODS

The unique, self-testing Safety Linear Encoder and the photocells detect possible obstacles and reopen the door when needed. The curtain itself is intrinsically safe, as it has a soft bottom and contains no rigid bars.

EMERGENCY OPENING

In case of emergency, a red handle can be turned to release the counterweight and open the door.

Counterweight

Smart & nice design

ITALIAN LOOKS

A Ditec door has a streamlined design. Large windows are available for maximum visibility. The curtain can also be printed with your own design.

LOW MAINTENANCE

The Ditec Sector Reset, with few moving parts and a specially designed side guide, requires little maintenance. Thanks to the self-reintroduction of the curtain and the absence of rigid bars, repair costs are limited in case of an accidental crash. Counterweights reduce the efforts required by the motor, resulting in a longer lifetime and less maintenance costs.

SPACE SAVING

The small columns of the Ditec Sector Reset reduce its footprint and make it the ideal door for applications with limited space. The self-supporting frame and the absence of a side-motor allows for installation in a corridor or any other limited space.

Self-reinserting

© Entrematic Group AB – 2018

Entrematic offers a comprehensive range of products for industrial, commercial, institutional and residential applications, including sectional doors, loading dock equipment, high-performance doors, residential garage doors, pedestrian doors, gates and barriers, and automation and operators.
